

Hashing

hashing number using array

```
for (int i = 0; i < n; i++)  
{  
    cin >> arr[i];  
}  
// hash  
int hash[MAX] = {0};  
for (int i = 0; i < n; i++)  
{  
    hash[arr[i]] += 1;  
}
```

hashing on string

```
#define MAX 256  
int main()  
{  
    string s;  
    cin >> s;  
    int hash[MAX] = {0};  
    for (int i = 0; i < s.size(); i++)  
    {  
        hash[s[i]] += 1;  
    }  
    int q;  
    cout << "Number of search queries ";  
    cin >> q;  
    while (q--)  
    {  
        char c;  
        cout << "Enter Char to search ";  
        cin >> c;  
        cout << hash[c] << endl;  
    }  
    return 0;  
}
```
